

**LASER WELDED
STEEL SIDE WALLS FOR TRAILERS**

BOMANTI[®]

The steel sheet covers we produce for use in agricultural trailers are produced in a fully automatic Rollforming machine system. The production process of the caps, which are produced using high quality raw materials, is as follows; Mass production of the sheet metal cover is carried out by continuous bending and shaping with special molds and balls on the line where the raw material is carried to the machine by the feeding unit.

Specially designed profiles at the top and bottom to increase the carrying capacity of steel sheet covers are combined using the latest technology and %100 uninterrupted laser welding. In this way, water is prevented from entering the profiles. In this way, the risk of corrosion is eliminated.

Thanks to these fully insulated profiles reaching the optimum quality level with their static and dynamic strenght, your trailers can be used in a wear-resistant manner for many years.

As a result of these technical advantages, significant cost savings are achieved. Thus, trailer manufacturers will have the opportunity to save on labor, time and energy, as well as produce without wastage.

SIDEWALLS CAN BE PRODUCED IN REQUIRED LENGHTS.

PROFILES TYPE CNA SERIES

These profiles are used for the front and rear lower sections of trailers. It is also suitable for side covers if desired.

SHEET SIDE BOARDS ARE PRODUCED IN 2MM AND 2.5MM THICKNESS

PROFILES TYPE CNE SERIES

These profiles are used for the lower side parts of trailers. Thanks to its 60mm upper section, it can withstand more load. It is suitable for use on front and back covers if desired.

SHEET SIDE BOARDS ARE PRODUCED IN 2MM AND 2.5MM THICKNESS

PROFILES TYPE CYA SERIES

PROFİL TİPİ CYA SERİSİ

These profiles are mounted on the bottom covers at the front and rear of the trailers. It is produced as an additional cover to increase the capacity of trailers. It is suitable for use on side covers if desired.

SHEET SIDE BOARDS ARE PRODUCED IN
2MM AND 2.5MM THICKNESS

PROFILES TYPE CYE SERIES

PROFİL TİPİ CYE SERİSİ

These profiles are mounted as additional covers on the side covers to increase the capacity of the trailers. Thanks to its 60mm upper section, it can withstand more load. It is also suitable for front and back covers if desired.
